KOICHI IO

Whirl Vessel
Manufactured by Koichi Io
Japan, 2024
Patinated shibuichi (70% copper, 30% silver alloy)

Measurements
42 × 42 × 12h cm
16,5 × 16,5 × 4,7h in

Details
Unique Piece

About

Koichi Io is a Japanese designer whose practice bridges traditional metalworking techniques and contemporary sculptural expression. Trained in Tokyo and Seoul, he creates metal vessels through processes such as hammer-raising, chasing, and patination. Works such as Whirl Vessel explore variations in volume, texture, and proportion, revealing the traces of craftsmanship through expressive forms and richly patinated surfaces.

Biography

Koichi Io (b. 1987, Japan) is a Japanese metal artist whose practice bridges traditional metalworking techniques and contemporary sculptural expression. He studied metalwork at Musashino Art University in Tokyo before continuing his education at Seoul National University in South Korea, developing a practice shaped by both Japanese craft traditions and a broader East Asian approach to material and making. Working primarily with metals including silver, copper, and specialized alloys, Io employs demanding techniques such as hammer-raising and chasing, building each work gradually through repeated manual intervention. His vessels are characterized by carefully articulated volumes, subtle asymmetries, and surfaces that retain the physical traces of their production, emphasizing the relationship between material, gesture, and form. Io has received recognition in Japan and internationally for his contribution to contemporary metalwork. In 2019, his work was selected as a finalist for the Loewe Foundation Craft Prize, bringing his practice to an international audience. Through his ongoing exploration of vessel forms and metalworking processes, he contributes to a new generation of Japanese makers who approach inherited craft knowledge not as a fixed tradition, but as a field for experimentation and contemporary expression.
